

Early Phase Research

Comprehensive Expertise from First-In-Human through Proof-Of-Concept

Pierrel Research Early Phase experts team from First-In-Human through Proof-Of-Concept provides integrated solutions in strategic clinical drug development and its implementation.

In our research units, located in Eastern Europe, we can test compounds and devices in healthy volunteers, patients and special populations.

Working closely with General Practitioners and Specialists, we have always been able to meet the criteria for subject recruitment, to deliver timely results and high quality data.

Moreover, backed by sound knowledge and expertise, our staff ensures full customer satisfaction and alignment with concepts and strategies.

We give our clients a competitive advantage that delivers them in return on investment.

Structure and Equipment

Subject Area

- Wards (bedside alarms, video surveillance)
- Dining/recreation room
- Bathrooms

Medical Area

- Consultation rooms (ECG, Stress test, BP Holter, ECG Holter, Ultrasound, Spirometry etc)
- Emergency rooms (Emergency trolleys, Defibrillator, portable ECG, PEEP ventilator, Oxygen supply etc)

Biological Sampling Area

- Biological Sampling Area
- Nursing station
- Laboratory (chemical niche, cooling centrifuges, -20° / -70° freezers with automatic temperature control and alarm)

Pharmacy Area

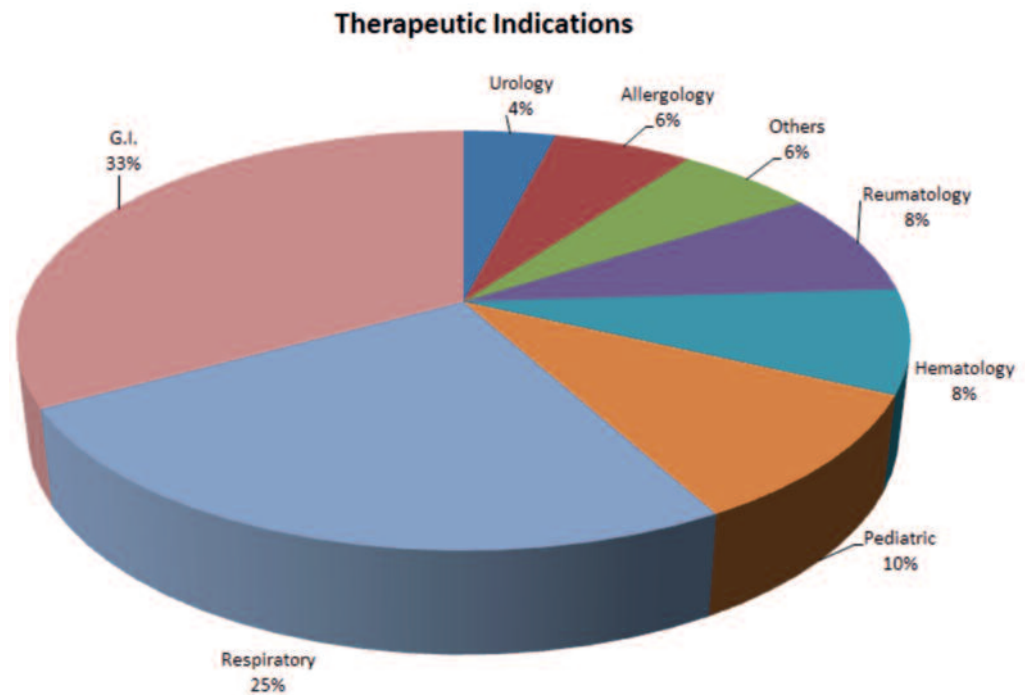

- Pharmacy (laminar flow hood, temperature control)
- Medication storage area (automatic temperature control, rodent, insect prevention)

All locations are provided with radio controlled centralized clocks, fire alarms and protection systems, refraction alarms, controlled access and video monitoring, emergency power generators and UPS

Study Type

Our Late Phase experience encompasses all types of late-development, peri-approval and post-marketing studies, including:

- First-In-Human
- Single/Multiple ascending dose
- Clinical Pharmacology
- PK/PD
- Cardiac Safety (QTc)
- Safety Tolerability
- Food/drug interaction
- Age/Gender
- Bioavailability
- Bioequivalence
- Variety of dosage forms
- Vaccines
- Medical Devices

Recruitment Potential

- Our research units are located in 3 different cities, covering around 2,5 Mio inhabitants
- Referral network developed with GPs and specialists
- Proximities to emergency facilities
- State-of-the-art emergency and resuscitation equipment
- Large database of healthy volunteers and many diverse patient populations available in-house

Key Advantages

- Fast EC submission and approval
- Study start within 1 week from EC approval (Fast 2 First)
- Fast recruitment
- High flexibility
- Unparalleled in-house experience across a spectrum of therapeutic specialities
- Vigorous QC process to ensure data integrity
- Timelines oriented and results driven
